

# YODHA

## A Grenade That Obeys

Introducing Yodha, a COMRADO Aerospace product, is practically a grenade, which instead of freefalling and exploding on its own, flies to your command and explodes on your demand. Yodha enables you to approach a moving target for up to 8 minutes. Yodha comes equipped with a 720p live video feed so that you don't have to run behind your target.

Yodha is very compact to store and travel with. It comes with foldable arms which turns its form similar to a 750ml can.

A couple of drones can be carried in a small ingress-protected case to any location, or can be held in your belt pocket for quick deployment.

Even if you don't find the target, the drone can be retrieved, recharged and deployed again in the next mission.

Every second is important in any mission. That's why the case also acts as a charger. So just plug it out, lift it off the shelf, and deploy.

The ergonomically designed ground control station (GCS) fits on your wrist, and along with the joystick, the drone can be controlled effectively from any hard position the operator may be in.

The GCS shows all the relevant flight parameters and the visuals as sent by the drone.
